

geo_struct::remap_periodic_bc

geo_struct::SupercellReInit

geo_struct::NeighborsMax

```
graph LR; A[geo_struct::remap_periodic_bc] --> C[geo_struct::NeighborsMax]; B[geo_struct::SupercellReInit] --> C;
```

The diagram illustrates a dependency or update relationship. Two functions, 'geo_struct::remap_periodic_bc' and 'geo_struct::SupercellReInit', are shown on the left. Blue arrows point from each of these functions to a variable, 'geo_struct::NeighborsMax', which is shown in a shaded box on the right. This indicates that both functions modify or depend on the 'NeighborsMax' variable.
